

A Powerful Solution for Marine Energy

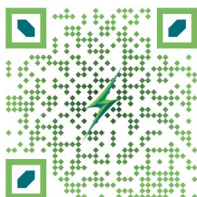

XALT Energy powers marine transportation – with hybrid and all-electric energy storage systems. Our experts combine:

- ▶ Proven lithium ion technology
- ▶ Manufacturing expertise
- ▶ Deep knowledge of the marine/ maritime market
- ▶ Key strategic partners

For more information, please contact us:

A major tide is changing the marine transportation industry. Rising fuel costs and stricter environmental standards are driving the hybridization of shipping vessels. Hybrid diesel-electric vessels offer significant savings on fuel costs. Hybrids also provide greater reliability, with batteries kicking in during an engine outage.

XALT Energy supports the changing needs of the industry with energy storage that provides:

- ▶ Time-tested lithium ion chemistry
- ▶ Wide operating temperature range
- ▶ Long life cycles
- ▶ High energy, high power
- ▶ High power densities
- ▶ Significant fuel savings
- ▶ Lower total cost of ownership (TCO)
- ▶ Quality and reliability

We are experts in total battery system engineering and design for marine vessels. XALT Energy will help you increase performance and lower your TCO.
